Title: Antex 10 mm tube soldering head set
Quantity Available: 1
Posted: 2 days ago

Description:

You are bidding on an Antex Pipemaster 10 mm soldering head set - see photos.
This item is New In its Original Box (NIOB) and has never been used.

[You can](#)

use it with the Antex Pipemaster soldering handle for soldering Yorkshire fittings whose outside diameter is 10 mm, such as the RF PA coils for a high-power transmitter.

[Why I am selling this item](#)

This set of heads came with my Antex Pipemaster soldering device. But I have no 10 mm pipes I need to solder. I do need a 25 mm soldering head set; so, I would be willing to exchange.

[Packaging](#)

I make no charge for packaging. Your item will be properly wrapped and packed to withstand the usual rigors of postal and courier delivery systems.

[Shipping - please read](#)

You must ask me to quote the shipping charge; why?

- There are often differences between what Australia Post's and other carriers' online calculators show, and what they actually charge. Generally, Australia Post uses the quickest delivery method, such as one of the more expensive Air Mail modes.
- If you win several items, I will bundle them to get you the most economical shipping charge.
- Though Australia Post includes insurance (up to AU\$100) and tracking as part of the carriage charge, some carriers do not. If the total transaction including shipping, exceeds AU\$100, I will require extra insurance to be paid. So, you must ask me to quote you for such additional delivery services as tracking, signature on receipt or insurance.
- If you are outside Australia and choose a carrier other than Australia Post, I will include tracking and add it as a charge.
